

ELECTRONIC SPEAKER PRESENTATION MANAGEMENT (ESP)

Running any event smoothly means ensuring that, no matter who is presenting or what room they're in, the right message is delivered each and every time. With ESP - one of the most advanced speaker presentation management Systems available - Microhire makes this possible.

Your presenters can walk into any room in your event venue and have all their pre-prepared content directly available in a fully automated process that is compatible with Powerpoint, Keynote and PDF, across both Windows & Mac platforms.

The software is so powerful and versatile that it automates the creation of holding slides for your presentation. What if the session is running behind or is starting late? ESP is so effective that it can transfer late presentations to any room without interrupting the session in progress.

ESP is the clear choice to impress your presenters and audience with seamless presentation delivery and management - before, during and after your event.

Uninterrupted Integration.
Unparalleled Vision.
