WIRELESS INTERNET SOLUTIONS
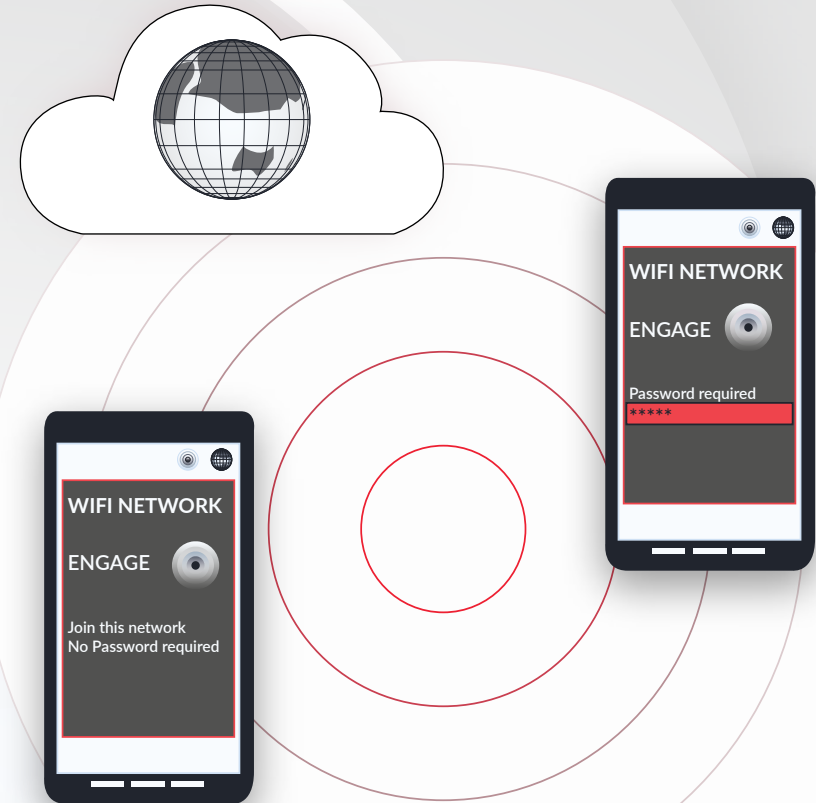

What is one of the single most important factors that determines the level of customer engagement at any event? Wireless Internet. If your audience can't get online, they can't interact with your brand, and they certainly can't broadcast to the world how much they love your event. Our wireless internet solutions ensure that you – and your delegates - won't miss a thing.

Want to promote your brand and engage with your audience on a whole new level? Customise splash pages, direct attendees to your website, show sponsor - the options are limitless!

Using the latest "cloud" and "mesh" technology, your event will stay online, and on track.

Mesh key features include:

- Graphic usage
- Wireless internet coverage for an entire venue or stadium
- Configure anywhere
- Full control over internet services
- Control access download speeds and security
- Customised splash page
- User bandwidth tailored advertisement
- Sponsor logos
- Device reporting
- Set up separately configured networks
